

ABSTRACT

A system, method and article of manufacture are provided for a knowledgebase framework. Information is obtained from at least one source utilizing a network. Utilizing a knowledge model, an index is generated for the obtained information. The generated index includes a plurality of items each associated with at least some of the obtained information. Utilizing the network, the generated index is displayed to a user. The user is permitted to select at least one of the items of the index. The information associated with the selected item is then displayed to the user utilizing the network.
